

AI Usage DISCLOSURE FORM

1. Team Details

Team Name: SE7EN

Project / Product Name: DUET (Samsung PRISM Theme 05)

Organization / Institution (if any): SRM Institute of Science and Technology

Submission Date: 30 September 2026

2. AI Usage Declaration

Did your team use any Artificial Intelligence (AI) in developing this project? Yes

Tools: Claude (Anthropic) and Grok (xAI), used for code and documentation.

3. Purpose of AI Usage (Brief Details)

Idea generation / brainstorming: Yes. Claude and Grok used to compare use-case options (Appliance Care, Family Care, Co-Driver) and to explain the dual-mind architecture.

Code generation or assistance: Yes. Claude and Grok assisted with Python for the agent, Appliance Care, Family Care, live routing, the scored-path pin, and tests. The team reviewed and edited all code.

UI / UX design: Yes. Grok assisted with the architecture slide (fast/slow minds) and submission-deck wording. No generated UI kit or third-party design assets.

Content creation: Yes. Claude and Grok drafted or revised README notes, architecture write-ups, the video script, and this disclosure. The team edited all text.

Data analysis: Yes. Claude and Grok helped compare our pipeline to official Full-Duplex-Bench v3 scoring scripts. No gold answers or proprietary datasets were ingested.

Testing / debugging: Yes. Claude and Grok helped write pytest scenarios and diagnose live-routing versus scored-path issues. The team ran and kept the tests.

Other: Architecture/harness explainers and demo-video script. Claude and Grok drafted; the team edited.

4. Feature Origin Classification (Please add/delete based on the number of the feature)

1. Feature Name: Dual-mind DUET agent (talker, thinker, coordinator)

2. Origin: Both (team-designed; Claude and Grok assisted)

3. Description: Team designed the LiveKit dual-mind runtime: a fast talker for acknowledgements in parallel with a slow thinker, a coordinator commit gate, and the 12 Full-Duplex-Bench v3 tools. Claude (Anthropic) and Grok (xAI) assisted with implementation, regression tests, and docs. Typical prompts asked for session-local routing, pinning scored runs to benchmark, and tests. The team reviewed, edited, and merged all output. No benchmark answers were hardcoded.

1. Feature Name: Smart Appliance Care

2. Origin: Both (team-designed; Claude and Grok assisted)

3. Description: Team designed the washer/dryer troubleshooting extension (error codes, lint trap, service booking). Claude and Grok assisted with the appliance toolbox, keyword routing, and pytest scenarios. The team modified all generated code. SmartThings is mocked; no proprietary Samsung APIs or private data were used.

1. Feature Name: Family Care

2. Origin: Both (team-designed; Claude and Grok assisted)

3. Description: Team designed check-on-family, Galaxy Watch vitals, Knox-style heart-rate, and SMS-to-Priya as honest mocks on the same dual-mind agent. Claude and Grok assisted with the family toolbox, alias handling, and tests. The team modified all output. No real Watch, Knox, or SMS traffic.

1. Feature Name: DUET Co-Driver (research concept)

2. Origin: Both (team-designed; Claude and Grok assisted)

3. Description: Team researched an in-car Co-Driver / Car-to-Home direction aligned with Samsung and HARMAN. Claude and Grok helped draft research notes and compare use-case options. Implemented extensions in the submission are Appliance Care and Family Care; Co-Driver remains a documented concept.

1. Feature Name: Documentation and submission materials

2. Origin: Both (team-authored; Claude and Grok assisted)

3. Description: Team authored README, architecture, protocol, and use-case docs. Claude and Grok drafted or revised architecture explanations, slide copy (including the fast/slow diagram), and this disclosure. The team edited all text before submission.

1. Feature Name: Demo video script and architecture explainer
2. Origin: Both (team-planned; Claude and Grok assisted)
3. Description: Team planned a 3-5 minute live demo (benchmark interruption/self-correction, then the extension). Claude and Grok drafted the spoken script and harness/architecture explainer. The team records and voices the video; AI did not generate footage.

5. Ethical & Compliance Confirmation

AI usage complies with guidelines and policies. **Yes**

No proprietary or copyrighted data misused. **I Agree**

6. Declaration & Sign-Off

Name of Team Representative: Panshul Arora

Role: Team Representative

Signature: Panshul Arora (typed)

Date: 30 September 2026
